

PHP Vulnerability Non-Impact Attestation

CVE-2026-109618 | CVE-2026-109619

DATE October 22, 2026

DISTRIBUTION Customer / External

To Whom It May Concern:

Levi, Ray & Shoup, Inc. (LRS), Enterprise Output Management (EOM), provides this attestation in response to the disclosure of PHP vulnerabilities CVE-2026-109618 and CVE-2026-109619. The assessment addresses currently supported LRS EOM software products, appliances, associated components, and LRS-managed or hosted services.

ASSESSMENT CONCLUSION

No impact identified. LRS EOM confirms that neither CVE-2026-109618 nor CVE-2026-109619 impacts any currently supported LRS EOM product or service.

Scope and technical basis

The assessment considered the applicability of the affected PHP runtime and exploitation conditions to supported product architectures and components, including bundled or third-party elements supplied with LRS EOM solutions. No applicable vulnerable PHP implementation or exploitable exposure was identified within the assessed product scope.

Remediation and customer actions

Because the supported LRS EOM portfolio is not affected, no product-specific patch, hotfix, PHP upgrade, configuration change, workaround, or service restart is required for these CVEs. There are no associated LRS EOM customer actions or service-impact dependencies.

Hosted services, third parties, and exploitation

No remediation is required for LRS EOM-managed or hosted services, and no affected third-party or bundled components were identified. LRS EOM has not identified product-specific exposure; accordingly, no LRS EOM-specific indicators of compromise or additional monitoring checks are being issued. Customers should maintain their normal monitoring of independently managed systems and infrastructure.

Ongoing assurance and communications

LRS EOM continues to evaluate relevant security disclosures through its vulnerability management and secure development processes. If new information materially changes this non-impact determination, LRS EOM will provide updated guidance through established customer support channels. At present, no further updates or customer remediation activities are anticipated for LRS EOM products.
