# LRS Output Management for Healthcare

Patient care involves critical documents. Lots of them. Including test results, patient records, arm bands, prescription labels and many more.

Doctors, nurses and other clinicians require a fast, secure and reliable delivery mechanism for all of these. Access has to be faster and more secure than ever before, whether it is from a cart in the hallway or right inside the exam room, immediate access is key.

Hospitals, clinics and doctor's offices face a complicated web of output with many application platforms and devices. This can lead to printing redundancies, unnecessary IT labor and delays in daily operations without the right tools and technical infrastructure.

Clinical systems house patient information but those can't ensure that critical patient documents are printed *where* they are needed most, or printed at all.

The rules have changed for delivering quality healthcare. Doctors are closer to patients with access to records just a reach away. This causes printing to become more complex. Proximity of data to printers becomes a more complex issue.

LRS<sup>®</sup> Output Management Solutions provide a single, fast, reliable, and secure printing environment solution so clinical staff can focus on delivering the best patient care when and where it matters most. Without the right output management solution it can cost you time and money, as well as lapses and delays in patient care.

The LRS solution allows your organization to remove complexities with mapping printers with EMR workflows.

Doctors and nurses do not have to worry about printer selection and instead, can focus on patient care.

LRS has developed interfaces that integrate with major EMR systems like Epic, Cerner, GE Healthcare and others. System records are no longer trapped behind hospital or clinic walls. Our solutions enable your EMR applications to print directly to affiliate institutions or remote clinics without interruptions or other issues that may have

prevented your staff from delivering top-notch care in the past.

## Compliance and Security

Security and compliance are constant concerns, especially in healthcare environments that use thin and/or zero clients. Our virtual desktop (VDI) printing solutions intelligently connect users and printers so roaming clinicians can print from any terminal to any device no matter where they are.

Pull printing authentication and audits allow your organization to remain HIPAA and PHI compliant. LRS solutions provide electronic, up-to-date access to critical reports even during down times or outages. Doctors, nurses and clinical staff have access to the most current reports when they need them.

The thing is that they take all these complicated printing activities and wrap them up into an interface that is easy to use. We don't have Windows print servers anymore for our EMR printing. It is all wrapped up in the LRS product. This is a lot of complexity that's just made much simpler.

— EDWARD-ELMHURST HEALTHCARE

Using LRS' tap and release print, the chain of custody on the document is ensured from the EMR system down to the print devices. This ensures that your patient document is protected and released appropriately by the practitioner.

From tap and release authentication at work stations, to printing the critical documents healthcare providers need, LRS software solutions for healthcare make providing care faster, safer, compliant and accessible from any location.

### TYPICAL HEALTHCARE ENVIRONMENT

Output in any healthcare environment is complex. They comprise many applications, platforms and output devices. Improperly managed, this can lead to printing redundancies, unnecessary IT labor and delays in daily operations. Ultimately this affects patient care.

### HEALTHCARE ENVIRONMENT WITH LRS

LRS Healthcare solution is a single solution to manage all print and electronic output throughout the organization. LRS is a reliable and secure printing environment. Staff can print what they need, where they need it and when they need it. Even during downtime outages.
