

Hüttenbrauck Kälte- und Klimatechnik GmbH

Drive Scanner Power Tools help climate control company optimize their document scanning processes

The Customer

Hüttenbrauck Kälte- und Klimatechnik GmbH designs and installs cooling equipment across a range of applications, as well as heat-recovery systems and remote supervision systems for manufacturers' facilities. They strive to deliver the most effective and reliable cooling technology solutions for clients of every size, from industrial, wholesale and retail businesses to private households.

The Challenge

Hüttenbrauck Kälte- und Klimatechnik GmbH wanted to optimize their scanning process, reducing the task to as few simple steps as possible.

Prior to implementing Scanner Power Tools (SPT), project documents first had to be scanned and then opened, named, and filed at the computer. With the SPT module, these steps can be performed directly at the MFP display (after access rights and filing variables have been defined).

Previously, there was little one could do about poor document quality, and skewed documents needed to be adjusted and rescanned. With SPT's unprecedented image cleaning, unwanted lines, spots and borders disappear and scans are straightened automatically.

SPT's Blank-Page Deletion feature eliminates close monitoring of scanned pages, as blank pages are automatically recognized and deleted.

At a Glance

- A climate control company wanted to automate the steps related to scanning and cleaning up documents.
- Drive Scanner Power Tools solution improved the efficiency and quality of the electronic document capture process.
- Customer staff save time and money by doing all of their scanning tasks directly at the MFP device instead of constantly moving between MFP and desktop. This helps them spend less time organizing their electronic documents and more time supporting their valued customers.

With Scanner Power Tools' unprecedented image cleaning, unwanted lines, spots and borders disappear and scans are straightened automatically.

The Solution

Scanner Power Tools provided Hüttenbrauck Kälte- und Klimatechnik GmbH with a streamlined scanning process that accelerated workflows – saving time (and money) – and resulted in qualitatively better scans. By centralizing workflows at the MFP display, complete with automatic access rights and filing options, the company standardized the scanning process which was a key goal for Hüttenbrauck Kälte- und Klimatechnik GmbH.
