

Section 508 Accessibility Standards

Product: VPS

Software Applications and Operating Systems - Detail Voluntary Product Accessibility Template		
Criteria	Support Features	Remarks and Explanations
(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.	Keyboard equivalents for all actions are provided	
(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.	The product does not disrupt or disable activated features of other products that are identified as accessibility features. The product does not interfere with keyboard accessibility features built into the operating system.	
(c) A well-defined onscreen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that assistive technology can track focus and focus changes.	A visual focus indicator that moves among interactive objects as the input focus changes is provided. The focus indicator is programmatically exposed to assistive technology.	
(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to assistive technology. When an image represents a program element, the information conveyed by the image must also be available in text.	Semantic information about user interface objects is provided. Labels are associated with controls, objects, icons, and images.	
(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.	Labels with consistent meanings are associated with all controls, objects, icons, and images.	
(f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.	Text is displayed through standard system function calls, which supports interaction with assistive technology.	
(g) Applications shall not override user selected contrast and color selections and other individual display attributes.	Product does not override or change user selected contrast, color selections or other individual display attributes.	
(h) When animation is displayed, the information shall be displayable in at least one non animated presentation mode at the option of the user.	Animation is not used.	

Section 508 Accessibility Standards

Software Applications and Operating Systems - Detail Voluntary Product Accessibility Template		
(i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	Color-coding is not used without supporting text.	
(j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.	When color customization is supported, the product allows customization of a variety of color selections.	
(k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.	The flashing or blinking of text, objects, or other elements is not used.	
(l) When electronic forms are used, the form shall allow people using assistive technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	Electronic forms are not used.	

Information, Documentation, and Support Documentation Requirements		
Criteria	Meet Standard and How	Do No Meet Standard
(a) Product support documentation. Make product support documentation provided to end users available in alternate formats upon request for no additional charge.	Documentation is supplied electronically in PDF format. On request, it can be supplied at no additional charge in hardcopy Manuals or as a Microsoft Word document.	
(b) Accessibility and compatibility features. Provide end users access to a description of accessibility and compatibility features of products in alternate formats or alternate modes upon request at no additional charge.	Supplied at no additional charge as a Microsoft Word document via email, hardcopy or supplied over the phone.	
(c) Support services. Accommodate communication needs of end users with disabilities when providing support services for products.	Support services are provided via telephone, e-mail and Internet web site.
