

The LRS Cerner Integration for VPSX

LRS has hundreds of healthcare customers. More than 70 of those are Cerner healthcare customers along with more than a decade of experience integrating with Cerner customers. Through our engagements with some of the largest healthcare organizations, LRS is able to dramatically reduce output costs and improve print performance and reliability.

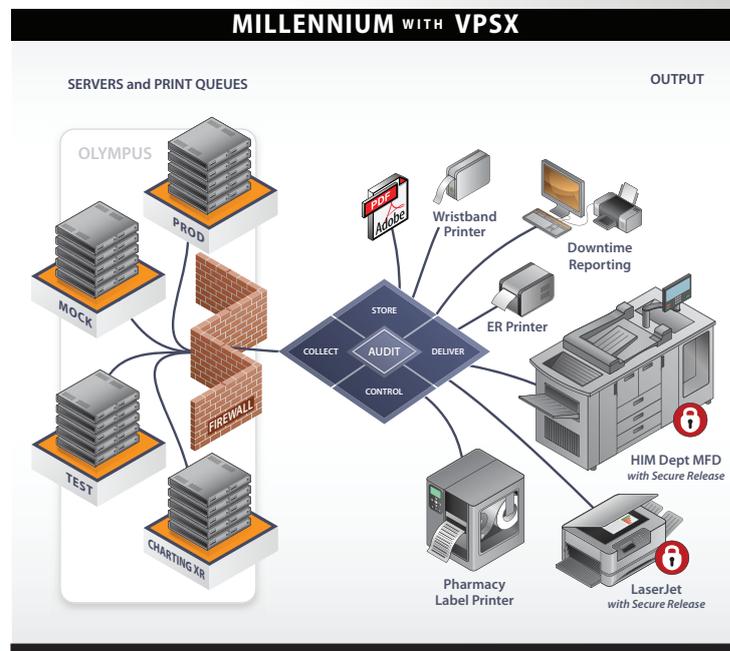

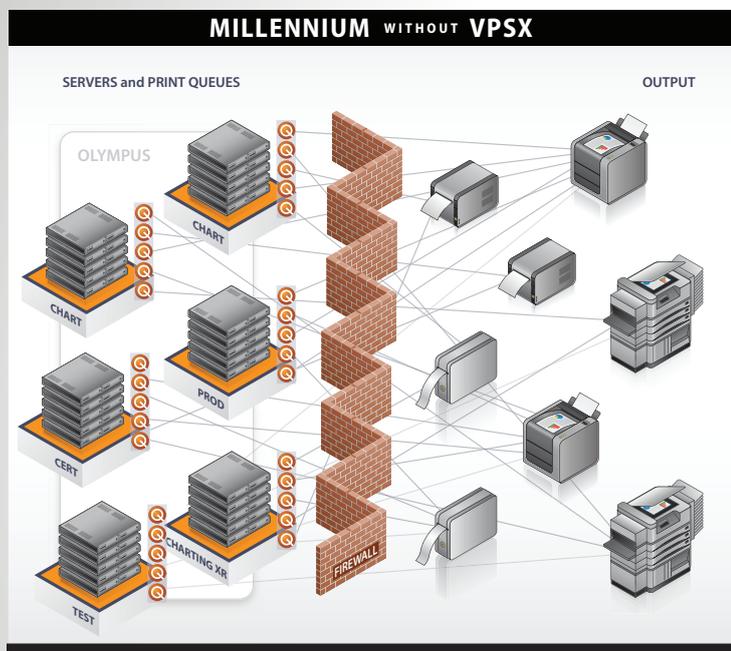

Benefits of LRS for Cerner:

- LRS supports Millennium backend and Charting output from one consolidated view of all printers
- Manage Millennium and other application output using one platform to print, view, archive, fax, or email
- LRS eliminates the need to have multiple networking groups /companies involved in troubleshooting networking issues
- LRS supports Windows® printing as well as other enterprise application output
- LRS® architecture uses a single printer definition per printer for all applications (Millennium, Charting, Soarian, Windows, Citrix, or other)
- LRS monitoring and troubleshooting tools permit better allocation of administrator and support resources
- Using LRS you will be able to decrease time to deploy new printers from days to minutes
- LRS regularly supports non-supported devices with the use of transforms. Transforms allow hospitals to transform Cerner Postscript output to other formats like PDF and ZPL
- Proven reliable: LRS handles over 60 million Millennium jobs a year at customer environments
- LRS facilitates document retention and search
- Aids in PHI audit and compliance (Who, when, where documents are printed and viewed)
- Simplifies the measurement and analysis of what and how much output is generated today
- Reduce the time, costs, and complexity of managing hospital data

Added Value of LRS for Cerner Customers

- Secure and mobile document printing
- Remote office or affiliate printing
- Downtime reporting solutions
- Printing portals and printer mapping

LRS VPSX for Cerner EMR provides reliable delivery of critical patient documents ensuring those documents are delivered quickly, correctly, and where they are needed. LRS handles more than 60 million CernerWorks jobs annually in customer environments. Printing issues occur less frequently and are easier to resolve.

CERNER BEFORE LRS

- Multiple Operating System queues
- Many printer definitions and possible points of failure
- Extensive OS printer administration
- Adding, moving or changing printers requires hours/days
- Multiple companies involved to troubleshoot networking and communication issues

CERNER AFTER LRS

- Manage Millennium, Soarian, and other enterprise application output in a central solution which provides control to manage all your enterprise output
- Administrators are able to distribute control by user or group of devices
- LRS web interface allows you to quickly view all issues and take immediate corrective action
- Administer both Cerner and non-Cerner output on the same server
- Route output from Cerner and enterprise applications to multiple devices, including mail servers and archiving solutions
- Decrease time to deploy printers (Moves, Adds, and Changes)
